Yes, this can be done, but there is a surprise waiting for you Beginning with Outlook 2007, Outlook only supports Microsoft Word as an engine for generation and display of messages in HTML format.. By creating an HTML email using an HTML editor that is not Microsoft Word or Outlook, you have the chance to test how the code will display in various browsers and mail clients.. Why is it so important to save the initial HTML code of emails?The answer to this question is very simple – to be sure that your HTML email will look the same in Microsoft Outlook and in Google Mail, Apple Mail and in email clients on tables and mobile devices.. But as soon as you try to create an HTML message using special software and use the resulting HTML as a source for your message, you will be surprised: Outlook doesn't allow you to use your own HTML source to build a message! "OK, but it is not a big problem" – you say, and again you may be right, because you can open the resulting HTML message using Internet Explorer and copy-n-paste the data through the clipboard into the Outlook message. After this transformation, we can no longer be sure that this code will appear the way that we want it to.. ② Reply/Reply All You can choose to reply to just the sender or reply to all on the message.. We see that the size of the resulting file is 35 8Kb! Just like that, the file size increased 1000 times!But it looks the exact same as before.. It is a very powerful email client, but sometimes this power is a shortcoming One such case is using Microsoft Outlook to send HTML-formatted newsletters or forms.. More than use Office That's 1 in 7 people on the planet Microsoft Outlook is the go-to email client for business and a stunning number of users use it in everyday work.. These technical changes cause significant differences in both the appearance of the resulting message as well as in the HTML code itself, which undergoes alterations and corrections.. To clarify what the differences are, let's look at the source of this new HTML file: Visit and download the add-in to send your emails with original HTML code!So we see that our simple HTML text has been enriched with a huge mass of 'garbage' that has come seemingly from out of nowhere, and which is many times greater than that original text in its initial format.. What is the HTML body of the message? We'll create a simple HTML file: Hello World! The file size is 36 bytes. e828bfe731 [Rsa private decrypt Example](#)
